# Multistage Centrifugal Pumps HEGA 2502 ... 8009

# Pump Systems Group

(ABN 38 027 781 316) COSTAL: P 0 BOX 329, BAYSWATER VICTORIA, 3153 ACTORY 21 LONDON DRIVE, BAYSWATER, VICTORIA, 3153 *Tol: 03 9762 3100* 

#### **TECHNICAL DATA**

Flow:	max. 190 m³/h
Head:	max. 425 m
Speed:	max. 3600 rpm
Material:	Cast iron (0B, 0C, 0D, 0E, 0R, 0S, 0U)
	Stainless steel (4B)
Temperature:	max. 190 °C, depending on the shaft sealing
	and the materials execution.
Casing pressure:	max. 40 bar, depending on the operating
	temperature.
Shaft seal:	Stuffing box or mechanical seal.
Flange connections:	Suction flange, according to DIN 2501 PN 16,
	Discharge flange, according to DIN 2501 PN 40
Direction of rotation:	To the right (clockwise), when looking at the
	pump from the drive end.

### APPLICATION

Series HEG multistage centrifugal pumps are used in applications where the requirement is for trouble-free pumping of clear or slightly dirty liquids. They are used in:

- Heating plants
- Waterworks and water supply plants
- Pressure raising plants
- Circulating water and condensate plants
- Fire extinguishing plants
- Purification plants
- Irrigation plants
- Boiler feed water plants
- Pressurized water producing stations

#### DESIGN

Multistage horizontal centrifugal pumps with sectional casing and closed impellers.

The manufacturing program covers six sizes, with 2 up to maximum 13 stages, according to the size, the speed and the shaft seal. Axial thrust balancing is carried out by balancing the impellers separately. The remaining axial thrusts are taken up by adequately sized antifriction bearings.

The impellers, diffusers, as well as the wear ring from size 65, are interchangeable between stages.

Arrangements combining impellers of different diameters permit, within the application field, optimum matching to the required performance characteristics with the performance curve.

On the suction side, the mounting feet are arranged on the casing of the first stage. By this means, it is possible to ensure easy adaptation to different installation conditions, even subsequent to initial installation, by pivoting the suction head casing.

The driver is arranged on the suction side but discharge side driver or driver on both sides are possible on request.

All sizes can be supplied with one or more dummy stages, on request.

#### CONSTRUCTION

#### Casing pressure [bar]:

Discharge casing	Suction casing	Temperature range (1)
max. 40	max. 16	-10 to 120 °C
max. 38	max. 16	up to 140 °C
max. 32,6	max. 13	up to 194 °C

(1) Take in mind the application limit for the shaft seal

Discharge casing pressure = suction pressure + zero flow head. **Please note**: The relevant technical regulations and safety rules must be observed.

#### Flanges:

Suction side flange according to DIN 2533 PN16, discharge side flange according to DIN 2535 PN40.

The flanges can be drilled according to ANSI B16.1 class 250, on request.

#### Flange positions:

Suction flange arranged horizontally towards the right hand side (looking on the shaft end) and discharge vertical upwards.

On request, the suction flange can be arranged on the left and, in the case of pumps with three or more stages, also vertically upwards.

#### Bearings:

One cylindrical roller bearing according to DIN 5412 on the shaft end side and one deep-groove ball bearing according to DIN 625 on the discharge side, both lubricated by grease.

On request, two single row angular contact ball bearings, mounted in X arrangement, lubricated by grease, can be supplied on the discharge side.

### Shaft sealing:

Sealing of the shaft can be carried out either by a stuffing box or mechanical seal as required.

- Designation 001:
  - Uncooled stuffing box.

Temperature range: -10 up to 110 °C.

- Designation 022: Externally flushed, uncooled, lengthened stuffing box (nonavailabe for sizes 25 and 32).

Temperature range: -10 o 110 °C.

- Designation 511:
- Cooled stuffing box.
- Temperature range: up to 140 °C (up to 194 °C to consult).
- Designation BK3/BKS/BKU:
- Unbalanced single mechanical seal with rubber bellows and selfcirculation.
- Temperature range: -10 ℃ up to 110 ℃
- Designation BX3/BXS/BXU:
  - Equivalent to BK3/BKS/BKU plus refrigeration/heating chamber. Temperature range: up to 140  $^{\circ}\text{C}$

Other combinations are possible. Please consult with the factory. Construction not available for pumps 3207/11, 5005/08 and 6504/06 running at 3000 or 3600 rpm. For pumps size 80 is only possible for maximum 1500 rpm. (1) (2) (3) (4) (5) (6)

Construction not available for pumps size 80.

Pumps with special shaft support (version: M), consult the factory for the appropriated shaft material, according to the pump application.

For pumps size 80 only is possible for rotation speed up to 1500 rpm, or running at 1800 rpm and temperature lower than 50°C.

Standard construction only for pumps size 80.

(7) Only for pumps 3207/11, 5005/08 and 6504/06, running at 3000 or 3600 rpm.

#### Casing gasket:

The casings are sealed by means of Perbunan o'rings. Code of this version: P.

For temperature over 140 °C up to 194 °C, the casin gs are sealed with Viton o'rings. Code of this version: V.

#### Motor power, speed and number of stages:

By means of standard electrical motors, type of construction IM B3.

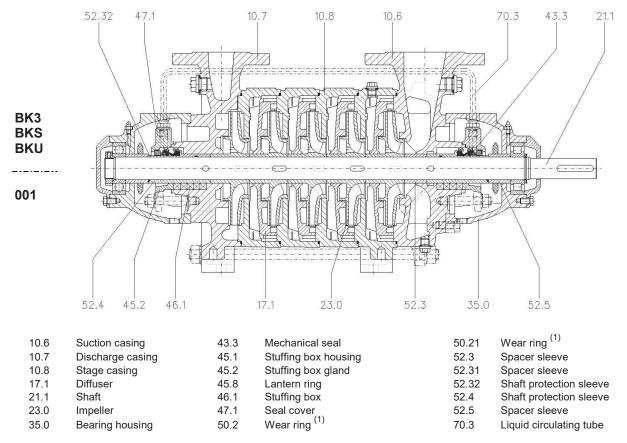

The following maximum numbers of stages as a function of shaft seal and speeds must be observed:

Pump size	Maximum speed		Maximum number	of stages accordin	ng to the shaft sea	I
Fump size	[rpm]	001	022	511	BK3/BKS/BKU	BX3/BXS/BXU
	1 800	13	-	11	13	11
2500	3 000	11	-	11	13	11

	3 600	2	2	2	3	2

#### **General notes:**

The following additional design is available: HESB: Vertical multistage centrifugal pumps, base supported for casing pressures up to 25 bar.

### Sectional drawing and list of parts

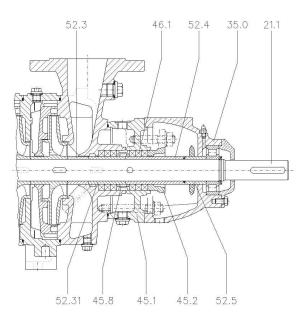

(1) Wear rings are used only in sizes 65 and 80

### Other types of shaft sealing arrangement:

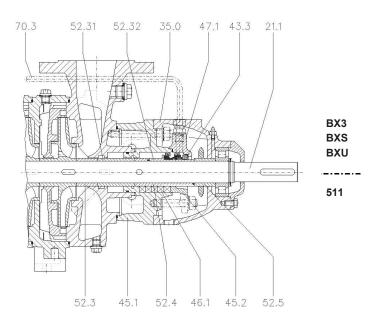

### Execution 022 (2)

Uncooled, lengthened stuffing box with external flushed.

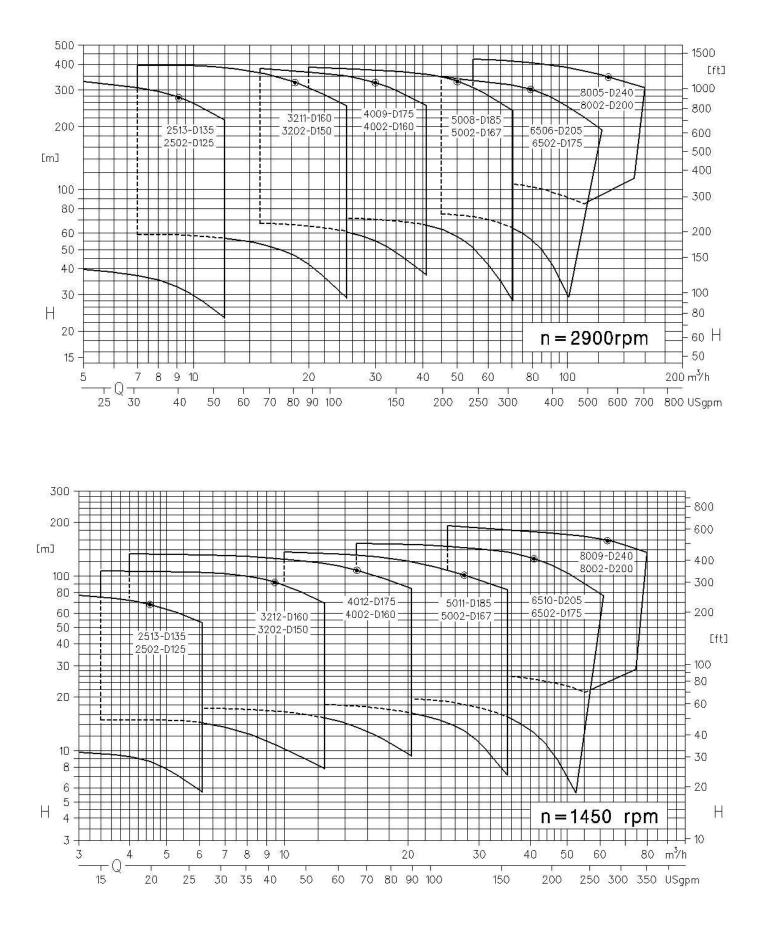

(2) Non-available for sizes 25 and 32

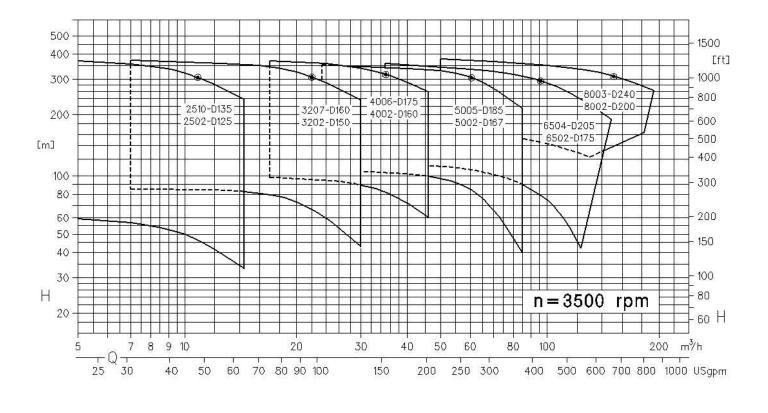

### **Execution 511 – Execution BX3/BXS/BXU** Cooled stuffing box – Refrigeration / Heating chamber.

# **Denomination – Instructions for ordering**

The table describes the codification for the pump denomination according to its execution.

Type, size and number of stages	Impeller combination	Hydraulic and shaft support	Shaft sealing	Materials of construction	Casing gasket	Drive, standard and orientation of the flanges (always seen from shaft end)
HEGA 02502 - 02513 03202 - 03212 04002 - 04012 05002 - 05011 06502 - 06510 08002 - 08009	0-4 0-4 0-7 0/9 0/9	<ul> <li>A · Hydraulic A</li> <li>B · Hydraulic B<sup>(1)</sup></li> <li>B One cylindrical roller bearing (DIN 5412) on the suction side and one deep-groove ball bearing (DIN 625) on the discharge side; both lubricated by grease.</li> <li>M One cylindrical roller bearing (DIN 5412) on the suction side and two single row angular contact ball bearings mounted in X arrangement on the discharge side; both lubricated by grease.</li> </ul>	<ul> <li>001 Uncooled stuffing box.</li> <li>022 Externally flushed, uncooled, lengthened stuffing box (only for sizes 40, 50 and 65).</li> <li>511 Cooled stuffing box.</li> <li>BK3 Unbalanced SKU single BKS mechanical seal with rubber bellows and self-circulation.</li> <li>BX3 Equivalent to BXU BK3/BKS/BKU BXS plus refrigeration or heating chamber</li> </ul>	<ul> <li>0B Main parts in cast iron</li> <li>0C Same as 0B but impellers in bronze</li> <li>0D Same as 0C but diffusers and wear rings in bronze</li> <li>0E Same as 0B but impellers in stainless steel</li> <li>0R Same as 0B but shaft in stainless steel</li> <li>0S Same as 0C but shaft in stainless steel</li> <li>0U Same as 0E but shaft in stainless steel</li> <li>4B Main parts of stainless steel</li> </ul>	<ul> <li>P O-rings of NBR<sup>(2)</sup> (Perbunan)</li> <li>V O-rings of FKM<sup>(2)</sup> (Viton)</li> </ul>	<ul> <li>DRIVE ON SUCTION SIDE:</li> <li>DIN/EN flanges, discharge vertical up, suction horizontal right.</li> <li>Same as 0, but suction horizontal left.</li> <li>Same as 0, but suction vertical up. (only for more than 3 stages)</li> <li>A Same as 0, but flanges drilled according to ANSI.</li> <li>B Same as 1, but flanges drilled according to ANSI.</li> <li>C Same as 2, but flanges drilled according to ANSI.</li> <li>DRIVE ON DISCHARGE SIDE (only for sizes 25, 32 and 40):</li> <li>DIN/EN flanges, discharge vertical up, suction horizontal left.</li> <li>Same as 3, but suction vertical up. (only for more than 3 stages)</li> <li>D Same as 3, but suction vertical up. (only for more than 3 stages)</li> <li>D Same as 4, but flanges drilled according to ANSI.</li> <li>Same as 4, but flanges drilled according to ANSI.</li> <li>F Same as 5, but flanges drilled according to ANSI.</li> </ul>

(1) Only size 3200

(2) Shortway according to ISO 1629
